CQC	0	970	970

Table 1: Counts of unique uids in 4-7-2024 spine and matches csvs

2 Beta release 2: July 16 2024

Second public release. Bug fix to ensure all matches are listed in the .matches.csv file. Previous version missed 1211 organisations due to a code bug which only included one match for each match type, so if an organisation matched two others by the same route it the second was omitted.

3 Beta release 3: September 30 2024

Third public release. Now includes data from Companies House bulk download released September 2024. Bug fix to ensure dissolution dates are in the main spine except in the case where at least one of the matched organisations have not been removed from the relevant register. In all other cases a removed entity should now have a removal date in the main spine. If there were competing dates (as in the case of a linked organisation), the most recent date will be in the main spine, with alternatives in the supplementary table.

CQC	0	975	975

Table 3: Counts of unique uids in 30-9-2024 spine and matches csvs

4 Beta release 4: December 10 2024

Fourth public release. Edits to algorithm to improve the presentation of matches. In particular, matches from within the saem source, such as charities which reregister, have the most recently active organisation present on the main spine. Previously the removal date was not being used to sort matches.
